

La couverture vaccinale complete des enfants de 12- 23 mois a augmente, mais elle est restee en deca des attentes passant de 34,7% en 1993, a 29,3% en 1998 et 43,9% en 2003. Les facteurs associes a la vaccination des enfants de 12-23 mois en milieu rural au Burkina Faso ont ete analyses a plusieurs periodes et a differents niveaux. Plusieurs strategies de recherche et quatre sources de donnees ont ete utilisees. Des approches quantitatives et qualitatives ont permis de repondre a plusieurs questions et les resultats sont presentes sous forme d'articles. Le PEV dispose de ressources adequates, ses dimensions techniques et programmatiques sont bien maitrisees et les differentes initiatives internationales soutenues par les bailleurs de fonds lui ont apporte un support effectif. Le facteur humain est crucial: lors du recrutement du personnel de sante, une attention particuliere devrait etre accordee a l'adoption d'attitudes d'ouverture et d'empathie vis-a-vis de la population. Ce personnel devrait etre en nombre suffisant au niveau peripherique et surtout sa presence et sa disponibilite devraient etre effectives. Les liens avec la population sont a renforcer.
